The TM Fleet Transition

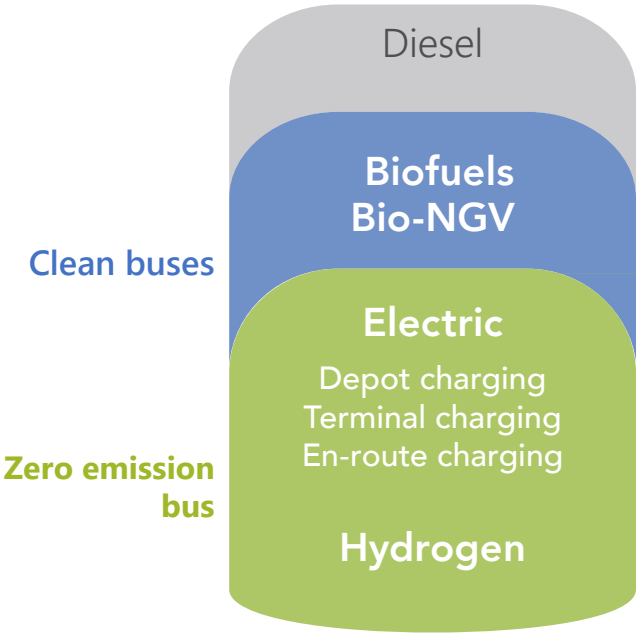

Our model can help you make the right decisions on how best to green your bus fleet.

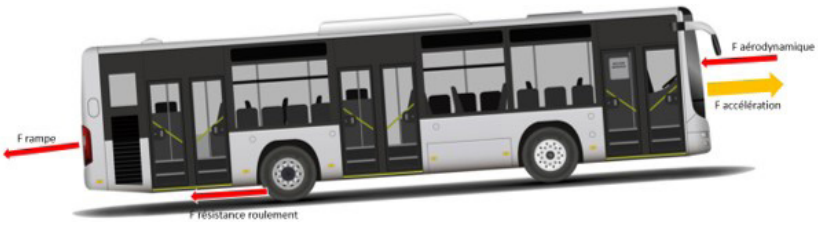

Every local transport authority has choices to make on how best to transition to cleaner, greener buses. With so many options available it can be challenging to make the right call on energy source and phasing across different types of services.

Trans-Missions can guide you towards **the best choice for your area** using our TM Energies model.

Based on the characteristics of the area and the network, our TM Fleet Transition Model model analyses all low- and zero-emission options: **biofuel, gas, electricity and hydrogen.**

The model will provide **a comparative cost and benefits analysis of different clean vehicle options.**

If you would like an informal conversation about how the TM Fleet Transition Model could help your authority then contact
